

End of Day (EOD) Report

Date: 16 July 2026

Accomplishments

- Completed the secure configuration of the email server using Postfix and Dovecot.
- Tested the email server by creating the accounts for the users added to the server in Thunderbird and test the mail transfer and receive.
- Hardened the Ubuntu host by enabling UFW with strict firewall rules and disabling root SSH login.
- Created a python script to test and verify system hardening.
- Created a GitHub repo and created a project sprint board. <https://github.com/Mohsin-Rasul/email-server>

Challenges

- Created a self-signed SSL certificate because the limitation of working within a private, no publicly accessible domain.

Next Steps

- All other team members as users in the email server and help them connect to the email server.
- Map our server ip to the domain using the dns server.

Status

In Progress – Core infrastructure and hardening are complete; final documentation and connection to the DNS server is in progress.

Regards,

Mohsin Rasul
