

End of Day (EOD) Report

Date: 20 July 2026

Accomplishments

- Completed some pending tasks and created the reports and uploaded to github.
- Created a Ansible playbook to automate installation of Thunderbird and tested and added some new clients.
- Created a secure SSH login for team member,so they can remotely access and work on the server across the Tailscale network.

Challenges

- The challenge we faced is that we can only install Thunderbird in Ubuntu Desktop but mostly users are on servers rn which is cli only.

Next Steps

- Implement and test the spam filter on the email server.
- Integration of database to the email server.

Regards,

Mohsin Rasul
