

End of Day (EOD) Report

Date: 31 July 2026

Accomplishments

- Created a private network and connected it to the outside network using a virtual router.
- Made a custom, smaller flavor so the new VMs don't use all the host disk space.
- Set up security rules to only allow ssh and http.
- Created 2 instances on the private network and attached floating ips to them using the cli.
- Did the daily kodekloud tasks.

Challenges

- The main DevStack was low on storage, which I fixed by creating the custom smaller flavor and expanding DevStacks storage.

Next Steps

- Test the two instances and document and make a Project Report.

Regards,

Mohsin Rasul
